

NOARA  
Rowing Equipment Management System (REMS)

**NOARA Announcement**  
**1/16/2009**

**NOARA introduces an exciting new product for NOARA Organizational Members.**

**Now, an online web based Rowing Equipment Management System (REMS) for Rowing Clubs and Organizations. NOARA introduces this new system to its organizational membership.**

**REMS Features**

Clubs can now input or upload (Excel format) fleet and equipment data to a secure online database using Google Docs. The club then has the ability to share your fleet database with Mariner Insurance and NOARA. Revisions can be made and shared with Mariner to order a policy change. Your Schedule will be updated and Mariner will order and confirm policy changes.

There is no need to call Mariner to change and update your fleet anymore. Just make the changes online.

Easily Add, Delete, Change. You can even list boats for sale or auction that can be added to NOARA's Online Store.

REMS will be a current schedule of vessels and equipment. It will remain up to date throughout the year. Upon your insurance renewal it should be up to date for the next year's policy.

A NEW Online Shell and Equipment Marketplace. Just mark the shell for sale, rent, trade, donate and it will automatically go into NOARA's Online Marketplace. A secure store that NOARA members can access to buy, trade, sell, or rent.

Shell Donations- NOARA will find a worthy home for your used "no or low value" shells and equipment.

This is one of several new products that NOARA will be introducing in 2009 to help club administrators simplify their work load. The REMS system will be available in the next few weeks. We are currently testing the system and will make an announcement as soon as it is live.
